they are like the first gameplay image the screenshots give you a feel that you're going to be playing a game which you are and the colors are decent there is no blue in it it makes the game more light and so no blinding effect The game is not so big but the normal sizes are large enough that you can see the stuff the menus and everything the background colors are very nice and you can tell the game is really well crafted the only thing is that the menus can be a bit hard to see depending on your device. The sound is cool and nice it is not loud or powerful it's just fine with what we have seen in the gameplay images we haven't heard any music so far but it's fine.

## **What's new in Elden Ring:**

**So the idea of 'Hollow' was born and I am excited to share it with you. I am unable to share any details on the game right now, but when I am able, I will be sure to share them.**

**Once again, I thank you all for reading. I hope you enjoy exploring the Lands Between.**

**Also...**

**It only takes a few hours to build a community made around a new game project, but after that, it requires a lot of time and effort to draw people's attention again, so I spent much of my free time last month searching for a way to accelerate growth, and I started searching for third-party development studios and game engine libraries.**

**I found one that was perfectly suited to the 'Hollow' project and decided to transfer the game over to it.**

**I found a development environment for Windows, PlayStation 4 and Xbox One that I really like, and as it currently supports Windows 32bit/64bit and Xbox One, we can consider it a perfect match for 'Hollow'.**

**But this studio, although it has a high quality game engine, is located in Japan, and the amount of time to create a game is several times longer than what it is in Korea, so I plan to first finish 'Hollow' and later work on the full release. But I am currently working on transferring the game to the engine, and a redesigned post processing node system is currently under development.**

**I would like to make 'Hollow' into a more mature game with a new post-processing feature, which was actually planned in the original game.**

**If you are interested in the new development environment, I would**

## **Xtream Bluio 3.2.0.347 IceCream - *RPC Chainer Feature***

### **RPC Chainer Feature:**

**Many websites are RPC-based and it's easy to be able to extract web content without changing contents of website. However, it's still hard to do daily work because RPC-based webpages are not integrated, that is, there isn't a small tool which must be open as well as filled with some values which are input for RPC-based content extraction. Thereby, I have developed a new small utility for windows which can handle both RPC-based and WEB content easily on windows platform.**
