

'aniMate 2 DS3 (64bit)' cannot be installed. ... Animate2 is built into Studio, just enter the serial number to activate it. What if you can't remember the number? For now I have found a solution, but I need your help with the following... On my machine I downloaded Win 7 Ultimate and I can't find the installer for Animate2. So I downloaded and ran the .exe file and now I can run Animate2 and create my videos. What is it like? Do I have to search the web for the number I forgot or was it easy to do just by downloading the Animate2 installer? Or maybe I can find the number on the Internet.
